

Earthquake and Environmental Hazard (EEH) *PhD course*

4th Welcome Day – XXXVI Cycle

Background:

- **2015-2018** bachelor degree in structural geology
 - “Control of fracture systems on karst phenomena in the ‘Grotte del Cavallone’ area (Taranta Peligna, Abruzzo)”
- **2018-2020** master degree in seismic tomography
 - “Seismogenic thickness, crustal structure and Vp – Vs anomalies in Central Southern Italy: role of fluids and seismotectonical implications”
- **2019** internship (INGV* – Ancona / UNICH)
 - “Waveform analysis of microseismic events: the case of Mt. Porrara”
- **2020** scholarship in “Seismological and geological data analysis for seismotectonic purposes”

Affiliations:

- EGU (European Geoscience Union)
membership

Posters/seminars:

- **2019** poster – 38° GNGTS** Annual meeting Rome, Italy
 - “Tectonic Earthquake Swarm (TES) in different seismogenic domains: compressional and Extensional cases from Central Italy” – R. de Nardis, L. Carbone, C. Pandolfi, F. Pietrolungo, **D. Talone**, G. Monachesi, M. Cattaneo, S. Marzorati, G. Lavecchia (2019)
- *INGV: Istituto Nazionale di Geofisica e Vulcanologia
- **GNGTS: Gruppo Nazionale di Geofisica della Terra Solida

PhD student: DONATO TALONE
donato.talone@unich.it

Reconstruction of 3D seismogenic sources: role of seismic tomography and uncertainties from multi-source datasets

Scientific purposes: give a contribution to the definition of 3D fault models, test seismic tomography potentials in this field, understand limitations derived from different datasets, provide a quantitative quality evaluation of the final 3D model

I year goals

- ✓ Implementation of the seismic tomography code (sequential and parallel)
- ✓ Test of real case:
 - Performance of the code
 - Reliability of results
- Definition of study area/s
- Data collection (literature and field trip)
- Preliminary analysis

II year goals

- Data processing
- Seismic tomography (abroad experiences)
 - University of Cambridge – prof. Nicholas Rawlinson (traveltime tomography)
 - Johannes Gutenberg universitat (Mainz) – prof. Luca De Siena (attenuation tomography)

III year goals

- Quantitative 3D fault model building
- Evaluation of uncertainties

Work in progress

- EGU21 vPICO presentation
 - “Regional fast-marching tomography in intracontinental settings: preliminary analysis of limitations and potential” – D. Talone, R. de Nardis, G. Lavecchia, L. De Siena (2021)
- Scientific paper about tomography in Central – Southern Apennines
